# 1. Description

## 1.1 General Description

The Yellow source color devices are made with AlGaInp on Substrate Light Emitting Diode .Product Package:1.60mmX0.80mmX0.55mm.

LED AlGaInp 1.60mmX0.80mmX0.55mm.

## 1.2 Features

PLCC2 Package.PLCC2

Extremely wide viewing angle.

Suitable for all SMT assembly and solder process. SMT

Available on tape and reel.

Moisture sensitivity level: Level 2. Level2

Compliance with RoHS and REACH. RoHS REACH

Qualifications: The product qualification test plan is based on the guidelines of AEC-Q101 Stress Test Qualification for Automotive Grade Discrete Semiconductors

AEC-Q101

## 1.3 Application

0 +Ö“-CP8D

### 1.4 Package Dimension

#### Notes

1. All dimensions units are millimeters.
2. All dimensions tolerances are  $\pm 0.2\text{mm}$  unless otherwise noted.

$\pm 0.2$

## 1.5 Product Parameters

Table 1-1 Electrical / Optical Characteristics at Ts=25°C

| Item                | Symbol      | Test Condition | Value |       |       | Unit |
|---------------------|-------------|----------------|-------|-------|-------|------|
|                     |             |                | Min.  | Typ.  | Max.  |      |
| Forward Voltage     | $V_F$       | $I_F=20mA$     | 1.8   | 2.1   | 2.4   | V    |
| Reverse Current     | $I_R$       | $V_R=5V$       | ---   | ---   | 10    | uA   |
| Luminous Intensity  | $I_V$       | $I_F=20mA$     | 230   | 320   | 430   | mcd  |
| Dominant wavelength | $\lambda_d$ | $I_F=20mA$     | 585.0 | 588.0 | 592.5 | nm   |
| Viewing Angle       | $\theta$    | $I_F=20mA$     |       | 120   |       | deg  |
| Thermal Resistance. |             | $I_F=20mA$     | ---   | ---   | 300   | /W   |

Table 1-2 Absolute Maximum Ratings at Ts=25°C

| Parameter                     | Symbol    | Rating     | Units |
|-------------------------------|-----------|------------|-------|
| Power Dissipation             | $P_D$     | 72         | mW    |
| Forward Current               | $I_F$     | 30         | mA    |
| Peak Forward Current          | $I_{FP}$  | 100        | mA    |
| Reverse Voltage               | $V_R$     | 5          | V     |
| Electrostatic Discharge (HBM) | $E_{SD}$  | 2000       | V     |
| Operating Temperature         | $T_{OPR}$ | -40 ~ +100 |       |
| Storage Temperature           | $T$       | -40 ~ +100 |       |
| Junction Temperature          | $T_J$     | 120        |       |

| Cooling speed  |                                 | 6 °C/ Max 6 °C/ s |
| 25 °C  | Needed time from 25 °C to $T_p$ | 8 Max 8 minutes   |

Notes

(1)Reflow soldering should not be done more than twice. If more than 24 hours between the two solderings , LED will be damaged. 24 LED

(2)Whensoldering , do not put stress on the LEDs during heating.

3.1.1 Soldering Iron

(1) When do soldering by hand, keep the temperature of iron below less 300 less than 3 seconds , 300 3

(2) Soldering by hand should be done only one time.

3.1.2 Repairing

Repairing should not be done after the LEDs have been soldered. When repairing is unavoidable,a double-

## 4. Handling Precautions

### 4.1 Handling Precautions

(1) LED operating environment and sulfur element composition cannot be over 100PPM in the LED mating usage material. This is provided for informational purposes only and is not a warranty or endorsement.

LED 100PPM

(2) In order to prevent external material from getting into the inside of LED, which may cause the malfunction of LED, the single content of Bromine element is required to be less than 900PPM, the single content of Chlorine element is required to be less than 900PPM, the total content of Bromine element and Chlorine element in the external materials of the application products is required to be less than 1500PPM. This is provided for informational purposes only and is not a warranty or endorsement.

|         |        |        |
|---------|--------|--------|
|         | LED    | LED    |
|         | 900PPM | 900PPM |
| 1500PPM |        |        |

(3) VOCs (Volatile organic compounds) emitted from materials used in the construction of fixtures can penetrate silicone encapsulants of LEDs and discolor when exposed to heat and photonic energy. The result can be a significant loss of light output from the fixture. Knowledge of the properties of the materials selected to be used in the construction of fixtures can help prevent these issues. Refond advises against the use of any chemicals or materials that have been found or are suspected to have an adverse affect on device performance or reliability. To verify compatibility, Refond recommends that all chemicals and materials be tested in the specific application and environment for which they are intended to be used. Attaching LEDs, do not use adhesives that outgas organic vapor.

|     |     |     |
|-----|-----|-----|
| LED | LED | LED |
|     | LED |     |

(4) Handle the component along the side surface by using forceps or appropriate tools, Do not directly touch or Handle the silicone lens surface, it may damage the internal circuitry.

Fig 4-1 Handling Precautions

(5) In designing a circuit, the current through each LED can not exceed the absolute maximum rating specified for each LED. In the mean while, resistors for protection should be applied, other wise slight voltage shift will cause big current change, burn out may happen. The driving circuit must be designed to allow forward voltage only when it is ON or OFF. If the reverse voltage is applied to LED, migration can be generated resulting in LED damage.

LED

LED

(6) Thermal Design is paramount importance because heat generation may result in the Characteristics decline, such as brightness decreased, Color change and so on. Please consider the heat generation of the LEDs when making the system design.

LED

(7) Compared to standard encapsulants, silicone is generally softer, and the surface is more likely to attract dust, requiring special care during processing. In cases where a minimal level of dirt and dust particles cannot be guaranteed, a suitable cleaning solution must be applied to the surface after the soldering of components. Refond suggests using isopropyl alcohol for cleaning. In case other solvents are used, it must be assured that these solvents do not dissolve the package or resin. Ultrasonic cleaning is not recommended. Ultrasonic cleaning may cause damage to the LED.

LED

Table 4-1 Storage

| Conditions |                             | Temperature | Humidity | Time  |
|------------|-----------------------------|-------------|----------|---|
| Storage    | Before Opening Aluminum Bag | 30          | 75%      | Within 1 Year From Date                           |
|            | After Opening Aluminum Bag  | 30          | 60%      | Recommended for use<br>within 24 hours<br><br>24H |
| Baking     |                             | 60± 5       | -        | 24hours<br><br>24                                 |

(8) If the moisture absorbent material silica gel has faded away or the LEDs have exceeded the storage time, baking treatment should be performed after unpacking and based on the following condition 60± 5 for above 24 hours.

60± 5      24

If the package is flatulence or damaged, please notify the sales staff to assist.

(9) Similar to most Solid state devices; LEDs are sensitive to Electro-Static Discharge (ESD) and Electrical Over Stress (EOS).      LED

(10) Other points for attention, please refer to our relevant information.
