

# SPECIFICATION

# 1. Description

## 1.1 General Description

The Colour LED which was fabricated using a green chip Package Dimension :  
1.6mmX0.8mmX0.55mm.

LED

1.6mmX0.8mmX0.55mm

## 1.2 Features

Extremely wide viewing angle.

Suitable for all SMT assembly and solder process.

Moisture sensitivity level: Level 3.

RoHS compliant. RoHS

SMT

Level3

## 1.3 Application

Optical indicator.

Switch and symbol, display.

General use.

### 1.4 Package Dimension

Fig.1-1 Top view

Fig.1-2 Side view

Fig.1-3 Bottom view

Fig.1-4 Polarity

Fig.1-5 Soldering patterns

#### Notes

1. All dimensions units are millimeters.
2. All dimensions tolerances are  $\pm 0.2$ mm unless otherwise noted.

$\pm 0.2$

## 1.5 Product Parameters

Table 1-1 Electrical / Optical Characteristics at Ts=25°C

| Item | Test Condition | Symbol |
|------|----------------|--------|
|------|----------------|--------|

Notes :  $V_R=5V$  For test conditions.  $V_R=5V$

## 1.6 Typical Optical Characteristics Curves

Fig 1-6 Forward Voltage Vs Forward Current

Fig 1-7 Forward Current Vs Relative Intensity

Fig 1-8 Pin Temperature Vs Relative Intensity

Fig 1-9 Pin Temperature Vs Forward Current

## 2. Packaging

### 2.1 Packaging Specification

Package: 4000pcs/reel.      4000pcs

#### 2.1.1 Carrier Tape Dimension

Fig.2-1 Carrier Tape Dimension

#### 2.1.2 Reel Dimension

Fig.2-2 Reel Dimension

Table 2-1 Dimension

|   |            |
|---|------------|
| A | 8.0±0.1mm  |
| B | 178±1mm    |
| C | 60±1mm     |
| D | 13.0±0.5mm |

#### Notes

The tolerances unless mentioned ±0.1mm. Unit : mm      ±0.1

### 2.1.3 Label Form Specification

Fig. 2-3 Label Form Specification

Table 2-2 Parameter

|                |                  |
|----------------|------------------|
| PART NO.       | Part Number      |
| SPEC NO.       | Spec Number      |
| LOT NO.        | Lot Number       |
| BIN CODE       | Bin Code         |
|                | Luminous flux    |
| XY             | Chromaticity Bin |
| V <sub>F</sub> | Forward Voltage  |
| WLD            | Wavelength       |

| Thermal Shock            | JESD22-A106  | -40 15min<br>100 15min                     | 300 cycles | 22Pcs.   | 0/1     |
| High Temperature Storage | JESD22-A103  | T <sub>emp</sub> :100                      | 1000 hrs.  | 22Pcs.   | 0/1     |
| Low Temperature Storage  | JESD22-A119  | T <sub>emp</sub> :-40                      | 1000 hrs.  | 22Pcs.   | 0/1     |
| Life Test                | JESD22-A108  | T <sub>a</sub> =25<br>I <sub>F</sub> =20mA | 1000 hrs.  | 22Pcs.   | 0/1     |

## 2.5 Criteria For Judging Damage

Table 2-4 Criteria For Judging Damage

| Test Items      | Symbol | Test Condition | Criteria For Judgement |             |
|-----------------|--------|----------------|------------------------|-------------|
|                 |        |                | Min.                   | Max.        |
| Forward Voltage | $V_F$  | $I_F=20mA$     | -                      | U.S.L*)x1.1 |
| Reverse Current | $I_R$  | $V_R= 5V$      | -                      | U.S.L*)x2.0 |
| Luminous Flux   |        | $I_F=20mA$     | L.S.L*)x0.7            | -           |

### Notes

1.U.S.L: Upper standard level

L.S.L: Lower standard level

2.The above reliability tests is based on the verification of a single/strip LED of Refond's existing experimental platform,the reliability experiment was taken under good heat dissipation conditions. When customers applies the LED to the series and parallel circuit,should take consideration of all the factors

### 3. SMT Reflow Soldering Instructions SMT

#### 3.1 SMT Reflow Soldering Instructions SMT

Fig.3-1 SMT Reflow Soldering Instructions SMT

Table 3-1 Parameter

|   |                       |                   |
|---|-----------------------|-------------------|
| Average temperature rise speed                              | $T_{smax}$ $T_P$      | 3 °C/ Max 3 °C/ s |
| Preheating: minimum temperature                             | ( $T_{smin}$ )        | 150 °C            |
| Preheating: Max temperature                                 | ( $T_{smax}$ )        | 200 °C            |
| Preheating: Time  | $T_{smin}$ $T_{smax}$ | 60 - 120 60s-120s |
| Time limited to maintain high temperature: the temperature  | ( $T_L$ )             | 217 °C            |
| Time limited to maintain high temperature: The Time         | ( $t_L$ )             | 60 - 150 60s-150s |
| Peak /Classification of temperature:                        | / ( $T_P$ )           | 260 °C            |
| Time limit classification of peak temperature time          | $t_p$                 | 10 Max 10s        |
| Hold time within 5 °C with the actual peak temperature (TP) | ( $T_P$ )             | 30 Max 30s        |
| 5 °C  |                       |                   |
| Cooling speed   |                       | 6 °C/ Max 6 °C/ s |
| Needed time from 25 °C to $T_p$                             | 25 °C                 | 8 Max 8 minutes   |

Notes

(1)Reflow soldering should not be done more than twice. If more than 24 hours between the two solderings , LED will be damaged. 24 LED

(2)When soldering , do not put stress on the LEDs during heating.

3.1.1 Soldering Iron

(1) When do soldering by hand, keep the temperature of iron below less 300°C less than 3 seconds , 300 3

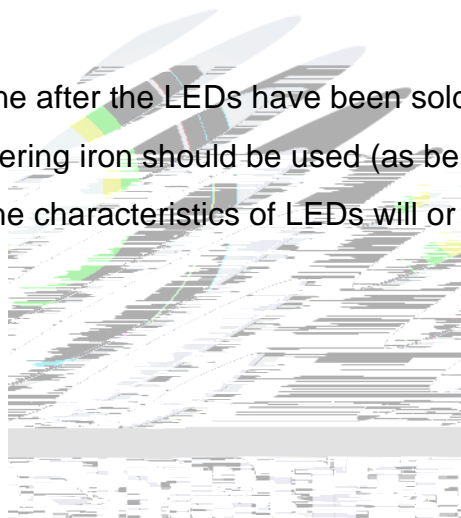

(2) Soldering by hand should be done only one time.

3.1.2 Repairing

Repairing should not be done after the LEDs have been soldered. When repairing is unavoidable,a double-head soldering iron should be used (as below figure). It should be confirmed in advance whether the characteristics of LEDs will or not be damaged by repairing.

LED

LED

3.1.3 Cautions

(1) Components should not be mounted on-warped (non coplanar) portion of PCB. After soldering, do not warp the circuit board.LED PCB

(2) Do not apply mechanical force or excess vibration during the cooling process to normal temperature after soldering. Do not rapidly cool device after soldering.

## 4. Handling Precautions

### 4.1 Handling Precautions

(1) LED operating environment and sulfur element composition cannot be over 100PPM in the LED mating usage material. This is provided for informational purposes only and is not a warranty or endorsement. LED 100PPM.

(2) In order to prevent external material from getting into the inside of LED, which may cause the malfunction of LED, the single content of Bromine element is required to be less than 900PPM, the single content of Chlorine element is required to be less than 900PPM, the total content of Bromine element and Chlorine element in the external materials of the application products is required to be less than 1500PPM. This is provided for informational purposes only and is not a warranty or endorsement.

(3) VOCs (Volatile organic compounds) emitted from materials used in the construction of fixtures can penetrate silicone encapsulants of LEDs and discolor when exposed to heat and photonic energy. The result can be a significant loss of light output from the fixture. Knowledge of the properties of the materials selected to be used in the construction of fixtures can help prevent these issues. Refond advises against the use of any chemicals or materials that have been found or are suspected to have an adverse effect on device performance or reliability. To verify compatibility, Refond recommends that all chemicals and materials be tested in the specific application and environment for which they are intended to be used. Attaching LEDs, do not use adhesives that outgas organic vapor. LED

LED

LED

LED

(4) In designing a circuit, the current through each LED can not exceed the absolute maximum rating specified for each LED. In the meanwhile, resistors for protection should be applied, otherwise slight voltage shift will cause big current change, burn out may happen. The driving circuit must be designed to allow forward voltage only when it is ON or OFF. If the reverse voltage is applied to LED, migration can be generated resulting in LED damage. LED

LED

(5) Thermal Design is paramount importance because heat generation may result in the Characteristics decline, such as brightness decreased, Color change and so on. Please consider the heat generation of the LEDs when making the system design. LED

LED

(6) Storage

Table 4-1 Storage

| Conditions |                             | Temperature | Humidity | Time                    |
|------------|-----------------------------|-------------|----------|-------------------------|
| Storage    | Before Opening Aluminum Bag | 30          | 75%      | Within 1 Year From Date |
|            | After Opening Aluminum Bag  | 30          | 60%      | 168hours<br>168         |
| Baking     |                             | 60±5        | -        | 24hours<br>24           |

(7) If the moisture absorbent material ( silica gel ) has faded away or the LEDs have exceeded the storage time , baking treatment should be performed after unpacking and based on the following condition ( 60±5 ) °C for above 24 hours.

60±5                      24

If the package is flatulence or damaged, please notify the sales staff to assist.

(8) Similar to most Solid state devices; LEDs are sensitive to Electro-Static Discharge (ESD) and Electrical Over Stress (EOS). LED

(9) Other points for attention, please refer to our relevant information.

Declare

This specification is written both in English and in Chinese and the latter is formal.
